[13.2 The Ozone Shield Flashcards | Quizlet](#)

The ozone layer (shield) is part of the Earth's stratosphere. The ozone layer is located in the lower part of the stratosphere, in a space between 20 and 30 kilometers above the earth. Stratospheric ozone receives the first blow of the sun's Ultraviolet-B radiation, and absorbs 97% to 99% of the average frequency of the sun's ultraviolet light. Ozone (O<sub>3</sub>) is present in the entire atmosphere of ...

[Ozone and Humankind - chymist.com](#)

The ozone layer or ozone shield is a region of Earth's stratosphere that absorbs most of the Sun's ultraviolet radiation. It contains a high concentration of ozone (O<sub>3</sub>) in relation to other parts of the atmosphere, although still small in relation to other gases in the stratosphere. The ozone layer contains less than 10 parts per million of ozone, while the average ozone concentration in Earth's atmosphere as a whole is about 0.3 parts per million. The ozone layer is mainly found ...

[Frequently Asked Questions about the Ozone Layer | Ozone ...](#)

The battle to protect the ozone layer is not over. CFC molecules remain active in the stratosphere for 60 to 120 years. CFCs released 30 years ago are still destroying ozone today, so it will be many years before the ozone layer completely recovers. 338 Chapter 13 Atmosphere and Climate Change [www.scilinks.org](http://www.scilinks.org) Topic: Ozone Shield SciLinks code ...

Section: The Ozone Shield Read the passage below and answer the questions that follow. High levels of UV light can kill single-celled organisms called phyto-plankton that live near the surface of the ocean. The loss of phytoplankton could disrupt ocean food chains and reduce fish harvests. In addition, a reduction in the number of phytoplankton would cause an increase in the amount of carbon ...

[Layers of the Earth's Atmosphere Worksheet includes ...](#)

Ozone in the stratosphere—a layer of the atmosphere between 15 and 50 kilometers (10 and 31 miles) above us—acts as a shield to protect Earth's surface from the sun's harmful ultraviolet radiation. Without ozone, the Sun's intense UV radiation would sterilize the Earth's surface. With a weakening of this shield, more intense UV-B and UV-A radiation exposure at the surface would ...

idea is the main focus or key idea. Frequently a main idea is accompanied by supporting information that offers detailed facts about main ideas. Read the question and write the answer in the space provided. 1. Why did populations concentrate in smaller areas during the agricultural revolution?

[Skills Worksheet Active Reading](#)

The ozone can no longer soak up or absorb the ultraviolet light from the sun's rays. Fortunately, CFCs were banned in the year 2000 after much debate and study by experts and leaders around the world. CFCs are no longer used and have been completely eliminated by most countries. The CFCs that were originally released into the air take a long time to disappear so it will take some time for the ...

[ozone shield - Deutsch-Übersetzung – Linguee Wörterbuch](#)

The ozone layer acts as a shield for life on Earth. Ozone is good at trapping a type of radiation called ultraviolet radiation, or UV light, which can penetrate organisms' protective layers, like skin, damaging DNA molecules in plants and animals. There are two major types of UV light: UVB and UVA. UVB is the cause of skin conditions like sunburns, and cancers like basal cell carcinoma and ...

[Ozone, O3, Stratosphere, Ozone depletion](#)

Ozone (/ ˈ oʊ z oʊ n /), or trioxxygen, is an inorganic molecule with the chemical formula O<sub>3</sub>. It is a pale blue gas with a distinctively pungent smell. It is an allotrope of oxygen that is much less stable than the diatomic allotrope O<sub>2</sub>, breaking down in the lower atmosphere to O<sub>2</sub> (). Ozone is formed from dioxygen by the action of ultraviolet (UV) light and electrical discharges within the ...
